

Point of Sale (POS) System

Handles retail transactions and inventory deductions. Includes product selection, price calculation, and sales receipt printing.

Business Rules

- For Cashiers / Sales Staff
 - Can create a sales transaction by selecting products and specifying quantities.
 - Can view pending transactions before payment completion.
 - Can update product quantities or remove items before finalizing the sale.
 - Can delete transactions that were created in error before finalization.
 - Can generate and print receipts for completed transactions.
- For Inventory / Store Managers
 - Can view all completed sales transactions for a period.
 - Can update product records, including price, description, and stock levels.
 - Can delete test or invalid product records.
 - Can generate summary reports of sales and stock levels.
- For System Administrators
 - Can create and manage cashier, manager, and inventory accounts.
 - Can configure product categories, pricing rules, and tax rates.
- System-Level Rules
 - Each transaction must be linked to a cashier and include one or more products.
 - Stock levels must be automatically updated after a transaction is finalized.
 - Transaction creation, updates, deletions, and receipt generation must be timestamped and logged.
 - Completed transactions cannot be deleted; they remain for historical and auditing purposes.
